February 13, 2017

Dear Long Valley Middle School Community,

We are writing to you today to report **GOOD NEWS** regarding recently conducted follow-up testing for lead in drinking water at the Long Valley Middle School. As you may already be aware, the State of New Jersey recently passed a law requiring all public schools to test for lead in drinking water prior to July 2017. In December we shared that 6 of the 52 water outlets tested at Long Valley Middle Schools exceeded the lead action level and required further follow-up. 3 of those outlets were not retested as they have been permanently removed from service. Additional testing of the remaining 3 outlets was performed on December 26, 2016. The follow-up testing involved repeating the initial test with standing water and then performing a second test after flushing the system. The use of flushed water is intended to best represent actual use. **We are happy to report that 2 of the 3 water outlets were below the action level as established by the US Environmental Protection Agency for lead in drinking water (15 µg/l [ppb]) utilizing the flushed water. The remaining outlet remained slightly elevated and has been removed from service.**

A copy of the test results is available in our central office for inspection by the public, including students, teachers, other school personnel, and parents, and can be viewed between the hours of 8:30 a.m. and 4:00 p.m. The results are also available on our website at wtschools.org. For more information about water quality in our schools, contact District Facility Manager A.J. Whitmore at 908-876-3616 x1027.

Information on reducing lead exposure around your home and the health effects of lead can be found by visiting the EPA's Web site at www.epa.gov/lead, calling the National Lead Information Center at 800-424-LEAD, and contacting your health care provider.

Sincerely,

Jeffrey S. Mohre
Superintendent of Schools

Liz George
School Business Administrator
